

RDS Canada is a new and growing support community for individuals and families affected by rare or young onset dementia across Canada. Our support is tailored (e.g., diagnosis, age, stage, family status) and continuous. We also provide education and training outreach to practitioners to increase capacity to build inclusive dementia services.

To further localize this model and extend our reach in Canada, including support to diverse peoples and families who are living in diverse regions, we are learning more about what support works best. This includes understanding on how to build collaborative support across local and specialist support communities. This work also contributes to a growing global community for rare dementia support.

Our project team includes:

Dr. Mary Pat Sullivan, RDS Canada and Nipissing University
Prof. Sebastian Crutch, RDS UK and University College London
Claire Webster, McGill University
Dr. Stephanie Tierney, University of Oxford
Josie McGee, Vision Loss Rehabilitation Canada

Dr. Veronika Williams, Nipissing University
Dr. Mattias Hoben, York University
Dorothy Larkman, Nipissing University
Ethan Hume, Western University
Dr. Jeff Thornborrow, Nipissing University

There are many opportunities for RDS Canada members with lived experience and practitioners to participate to help inform RDS Canada's growth and expansion. Further information can be found in our member area of the RDS Canada website. Contact us directly at rdscanresearch@nipissingu.ca

Our work is funded by the Canadian Institutes for Health Research. This study has received ethical approval from Nipissing University Research Ethics Board (file no. 8287).
